MANAGEMENT SUMMARY

PR#:

none known

Involved agencies:

Town of Babylon

Phase:

Phase IA & IB

Location:

Wyandanch

Town of Babylon

Suffolk County

Survey Area:

Length: about 2940 feet (896 meters) east-west

Width: up to 1740 feet (530m) north-south

Acres Surveyed: about 100 acres (40 hectares)

USGS:

Huntington, NY

Survey overview:

ST no. & interval: 1666 ST's at 50ft (15m) intervals

Size of freshly plowed area: na

Surface survey transect interval: na

Results:

No prehistoric or historic remains

Structures:

No. Of buildings/structures/cemeteries in project area: none

No. Of buildings/structures/cemeteries adjacent to project area: small cemetery

No. Of previously determined NR listed or eligible buildings/structures/cemeteries/districts: none

No. Of identified eligible buildings/structures/cemeteries/districts: none

Authors:

Alfred G. Cammisa, M.A.

Alexander Padilla, B.A. (CAD)

Date of Report:

Report completed: February, 2024

INTRODUCTION

Between August 21 and December 31, 2023, TRACKER Archaeology, Inc. conducted a Phase IA documentary study and a Phase IB archaeological survey for the proposed Suffolk Technology Park, Wyandanch, Town of Babylon, Suffolk County, New York.

The purpose of the Phase IA documentary study was to determine the prehistoric and historic potential of the property for the recovery of archaeological remains. This was accomplished by a review of the original and current environmental data, archaeological site files, other archival literature, maps, and documents.

A prehistoric site file search was conducted utilizing the CRIS resources of the New York State Historic Preservation Office - Field Services Bureau in Waterford, New York. Various historical and archaeological web sites were reviewed for any pertinent information.

The purpose of the Phase IB survey was to recover physical evidence for the presence or absence of archaeological sites on the property. This was accomplished through subsurface testing and ground surface reconnaissance.

The project area situated between Little East Neck Road, the Long Island Rail Road, North 28th Street, Nicholls Road, and a town park.

The study was conducted by TRACKER Archaeology, Inc. of Monroe, New York. Prehistoric and historic research was conducted by P.I., Alfred G. Cammisa, M.A. Field work was conducted by field director, Erin Murphy, B.A. and field technician, Lorne Montague, B.A. Report preparation was conducted by Alfred G. Cammisa with Alexander Padilla (CAD).

The work was performed for Nelson, Pope and Voorhis, LLC., Melville, New York, the applicant, Bristol Suffolk, LLC, San Francisco, CA, & the owner, Pinelawn Cemetery, Farmingdale, NY

ENVIRONMENT

Geology

The study area is located in the southeast portion of New York State, in the northwest part of Suffolk County. This portion of New York lies in the Atlantic Coastal Plains Physiographic Province. The coastal plain slopes gently eastward and is actually a strip of recently emerged sea bottom. The soils in this region consist largely of sand, clay and marl (a mixture of clay, finely fragmented shell and calcite). This area of Long Island appears to be situated just south of the Harbor Hill Moraine and Manetto Hills Interlobate Zone (Schuberth 1968:cover map, 9, 184-186; Jensen and Soren 1974; Sirkin 1996:41, 168).

Soils and Topography

Soils in the study area consist of:

NAME	SOIL HORIZON DEPTH in (cm)	COLOR	TEXTURE INCLUSION	SLOPE %	DRAINAGE	LANDFORM
Haven	O 2-1in (5-3cm) O 1-0 (-0) A 0-4 (-10) A 4-7 (-18) B2 7-19 (-48)	leaves organic 10YR2/2 10YR4/3 10YR5/4	Lo	0-2	well	outwash plains & moraines
Riverhead	Ap=0-12in (0-30cm) B=12-27 (-69)	10YR4/2 7.5YR5/6	SaLo	0-3	well	outwash plains
Plymouth	A1=0-4 (0-9) B=4-10 (-25) B2=10-17 (-43)	10YR3/2 10YR5/4 10YR5/6	LoSa	8-15	excessive	outwash plains

(Warner 1975: map #83 pgs. 68, 71-72, 78-79, 81-82).

KEY:

Shade: Lt=Light, Dk=Dark, V=Very

Color: Br=Brown, Blk=Black, Gry=Gray, Gbr=Gray Brown, StBr=Strong Brown, Rbr=Red Brown, Ybr=Yellow Brown

Soils: Si=Silt, Lo=Loam, Sa=Sand, Cl=Clay

Other: Sh=shale, M=Mottle, Gr=Gravelly, Cb=cobbles, Fi=Fine /or

Elevations on the property range from approximately 63 to 85 feet above mean sea level.

Hydrology

The project area is approximately 1 mile west of the headwaters of Geiger Lake and Carlls River. The stream flows south into the Great South Bay.

Vegetation

The predominant forest community inhabiting the Coastal Plain Physiographic Province in this vicinity (Cape Cod to the Carolinas) was the Northern Pine-Oak Forest. These forests are maintained largely by the effects of frequent fires. Were it not for the fires which the pine species have adapted to, these forests would slowly change to Mesic, dominated by oak, hickory and red maple. Northern Pine-Oak forests occur on sandy, or otherwise poor soils that are overly dry. All coastal plains of eastern North America are Xeric (dry forest). They generally have lower species diversity than bottomland forests (Kricher 1988:16-17, 65-66). The reason the forest soils and surfaces are so dry in this moist region is due to the excessive drainage of overly sandy soils on the Coastal Plain.

At the time of the Phase IB survey, the area consisted of a a pine and oak forest.

PREHISTORIC POTENTIAL

A prehistoric site file search was conducted at the New York State Historic Preservation Office (NYSHPO). Archaeological sites recorded within 1 mile of the study area included:

NYSM SITES	NYSHPO SITES	DISTANCE FROM APE ft (m)	SITE TYPE
8281		751 (229)	Wyandanch: Late Woodland Points, clay pots, earlier period item in vicinity

Indian foot trails passed through the vicinity. One such trail traversed along or near Jericho Turnpike (Route 25). Another trail traversed north-south from near Jericho Turnpike through eastern Nassau County apparently following an old drainage into Cold Spring Harbor (Stone nd:map; Cammisa 2000).

Assessing the known environmental and prehistoric archaeological data, we can summarize the following points:

- The project area is approximately 1 mile west of the headwaters of Geiger Lake and Carlls River. The stream flows south into the Great South Bay.
- The project area contains level to some steeply sloping topography with well drained soils.
- Indian foot trails passed in the vicinity of the project area.
- A prehistoric site is recorded nearby.

In our opinion, the study area has a higher than average potential for the recovery of prehistoric archaeological remains on any intact soils.

HISTORIC POTENTIAL

Contact Period (Seventeenth Century)

At the time of European contact and settlement, this section of Long Island may have been occupied by the Massakack people (Bolton 1975:map, 53-54; Stone-Levine 1980:161). They may ave been related to Massapequa tribe (Stone nd. map; Cooper 1882:99).

Indian foot trails passed through the vicinity near the project area. Indian foot trails passed through the vicinity. One such trail traversed along or near Jericho Turnpike (Route 25). Another trail traversed north-south from near Jericho Turnpike through eastern Nassau County apparently following an old drainage into Cold Spring Harbor (Stone nd:map). The foot trail along or near Jericho Turnpike has been documented in town documents and archaeological evidence shows the trail appears to have functioned since the Archaic Period (Stone nd: map; Cammisa et al 2000).

The town of Babylon was originally part of the town of Huntington.

Wyandanch, sachem of the Montauket who ecerslied jurisdiction over all Indian lands on the island, coifed the sale of land of what is now Babylon to Jonas Wood (Cooper 1882:99).

Eighteenth Century

The old Indian trails became established roads used by settlers (Huntington Historical Society 1937:17).

Nineteenth Century

About 1810 a movement to improve the old Indian trails (now established roads) spread to Long Island from upstate. Private companies were hired to improve road, build toll gates and levy tolls. These roads became known as turnpikes and were merely old dirt roads, in some cases straightened a bit, but worked into such shape that the road was raised toward the middle for better drainage with gutters along the edges. A toll gate along Jericho Turnpike was placed at Commack in the Huntington-Smithtown border (Huntington Historical Society 1937:17-18).

Farmers were principally engaged in raising wheat, rye and corn, and the raising of livestock, including horses, cattle and sheep. Only a limited amount of sheep were originally raised due to the ever present threat of wolves. As many as five flour mills were constructed (Street 1982:36).

The 1836 Colton map shows what appears to be Carls River as Sampawams Brook. Argyle, Southard and Belmont Lakes are depicted but not Geiger Lake. Straight Path appears to be shown. No buildings are nearby the project property (Figure 3).

A stagecoach line passed along Jericho Turnpike. A stage stop was located in Dix Hills at Carlls tavern (Huntington Historical Society 1937:234).

The 1858 Chace map shows Carl River as Geiger River and Geiger Lake to the north. This area is undeveloped (Figure 4).

The 1873 Beers atlas shows no buildings on or adjacent to project area. Brick yards are depicted nearby as is the Conklin and Barlett buildings. The oldest house in town was built by Jacob Conklin who served under Captain Kidd (Figure 5; Cooper 1882:121).

The 1888 Wendelken atlas shows no building or structures on or adjacent to the property. Brick yards here re still in business (Figure 6).

Twentieth Century

The 1903 U.S.G.S shows no buildings on or adjacent to the project parcel (Figure 7).

An historic site file search was conducted at the New York State Historic Preservation Office (NYSHPO). Archaeological sites recorded within 1 mile of the study area included:

NYSM SITES	NYSHPO SITES	DISTANCE FROM APE ft (m)	SITE TYPE
	10301.000097	4385(1336)	Wyandanch-last stand (oral report):on Carl's River, mid 20th century oral report of Indian graveyard with an Indian Living on site and "relics" were found (noticed on walking path to school (Cammisa p.c.)

Assessing the known environmental and historic archaeological data, we can summarize the following points:

-The project area is approximately 1 mile west of the headwaters of Geiger Lake and Carlls River. The stream flows south into the Great South Bay.

-The project area contains level to some steeply sloping topography with well drained soils.

-Indian foot trails passed in the vicinity of the project area.

-A native American historic site was recorded in the vicinity of the project area.

-No historic map documented structures appears on or adjacent to the project area. However, brick industries were close by.

In our opinion, the study area has higher than average potential for the recovery of nineteenth to early twentieth century Euro-American sites and for historic native American sites.

FIELD METHODS

Walkover-Reconnaissance

Exposed ground surfaces (70 to 100 percent visibility) were subjected to a close quarters walkover, at 3 to 5 meter intervals, to observe for artifacts. Covered ground terrain was reconnoitered at about 15 meter (50ft) intervals to observe for any above ground features, such as berms, depression, or rock configurations, which could be evidence for a prehistoric or historic site. Photographs were taken of the project area.

Shovel Testing

Shovel tests (ST's) were excavated at about 15 meter (50ft) intervals across the project area. Each ST measured about 30 to 40 cm. in diameter and was dug into the underlying subsoil (B horizon) 10 to 20 cm. when possible. All soils were screened through 1/4 inch wire mesh and observed for artifacts. Shovel tests and surface finds were flagged in the field. All ST's were mapped on the project area map at this time.

Soil stratigraphy was recorded according to texture and color. Soil color was matched against the Munsell color chart for soils. Notes were transcribed in a notebook and on pre-printed field forms.

FIELD RESULTS

Field testing of the project area included the excavation of 1666 ST's across the project area. No prehistoric artifacts or features were encountered. No historic artifacts or features were encountered. The project area was a heavily overgrown thicket and was brush hogged before field work.

There is an adjacent unmarked historic cemetery that would require a buffer around it from the proposed development.

Stratigraphy

Stratigraphy across the property consisted of the following:

A/O horizon - about 5 cm thick of rootmat, leaves, and humus.

A horizon - 20 to 25 cm. thick of mostly 10YR4/3 brown loamy sand with occasional loam or sand. This layer was occasionally partially stripped. There appears to be burning in incidents off and on across the property in the past.

B horizon - consisted of about 10 cm. dug into of 10YR5/6 yellow brown loamy sand. Mostly, this layer was impacted by buildings, or pavement, or stripped for driveways, roads, etc.

CONCLUSIONS AND RECOMMENDATIONS

Based upon topographic characteristics, distance to other known prehistoric sites and an Indian trail, the property was assessed as having a higher than average potential for encountering prehistoric sites.

Based upon topographic characteristics, distance to historic map documented structures or sites, Indian trails or wigwams, the property was assessed as having a higher than average potential for encountering historic sites.

The field testing included the excavation of 1666 ST's on the project area. No historic artifacts or features were encountered. No prehistoric artifacts or features were encountered. A buffer is recommended around the adjacent historic cemetery from the proposed development. No further work is recommended.
